1. Connect a Phono cable from the AMP jack of the ARB to the Amplifier's Relay.

Do not use the ARB-704 with pulled to ground to activate! amplifier relays that are not

If the amplifier has a standard RCA Phono plug it will always be safe to use with this The relay or amplifier control system MUST be the type that is pulled to ground to activate! Nearly all commercial amplifiers manufactured after the mid 1960's are safe to use with this unit. The ARB-704 connects between the radio and the amplifier, preventing damage to the radio from amplifier keying voltages.

positive, negative, and AC relay lines. This The ARB-704 work with all standard manufactured amplifiers including those with includes, but is not limited to, Ameritron, B&W, Collins, Command, Dentron, Heathkit, and Yaesu amplifiers.

- 2. If using ALC, connect a Phono cable from the ALC of the Amplifier's ALC to the ARB-704's ALC.
- 3. Connect the 5 pin end of the PNP cable into the Multi-port of the ARB-704

Then connect the 15 pin end to the Transceiver's Linear Jack.

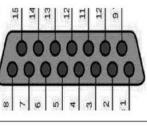

DO NOT connect power to the ARB's power jack. NOTE:

The ARB's power and radio jack is not used for this application.

NOTE:

The Jumper setting in the ARB-704 stays at factory default.

the light on the ARB will light and the When the transceiver is placed into transmit, amplifier will go into transmit mode.
